

└─ The note directive

This is an example.

This is an example of that.

Look at the previous slide for an example of that.

└ Notes as containers

The custom `rst2beamer` directives won't be recognised by any writer other than `rst2beamer`. Therefore, we allow certain containers (which most other writers should recognise and at worst ignore) to act like notes.

Any container with the name `'rst2beamer-note'` or `'rst2beamer-note'` will be handled like the notes directive.

Compatibility is important

Important: I must find out why the container names are being munged.
