$$h_1 = 5 \quad \gamma_1 = 100 \quad \gamma_{sat1} = 110$$

$$\phi_1 = 26 \quad c_1 = 50$$

$$h_2 = 10 \quad \gamma_2 = 110 \quad \gamma_{sat2} = 120$$

$$\phi_2 = 30 \quad c_2 = 0$$

$$h_3 = 7 \quad \gamma_3 = 120 \quad \gamma_{sat3} = 130$$

$$\phi_3 = 34 \quad c_3 = 0$$

$$z_0 = 0 \quad (\text{at the ground surface})$$

$$\sigma_0 = 0.000$$

$$u_0 = 0.000$$

$$\sigma'_{v_0} = \sigma_0 - u_0 = 0.000 - 0.000 = 0.000$$

$$z_1 = 5 \quad (\text{at the first layer boundary})$$

$$\sigma_1 = \sigma_0 + h_1 \cdot \gamma_1 = 0.000 + 5 \cdot 100 = 500.000$$

$$u_1 = 0.000$$

$$\sigma'_{v_1} = \sigma_1 - u_1 = 500.000 - 0.000 = 500.000$$

$$\phi_{1_r} = \text{radians}(\phi_1) = \text{radians}(26) = 0.454$$

$$ka_1 = \left( \tan \left( \frac{\pi}{4} - \frac{\phi_{1_r}}{2} \right) \right)^2 = \left( \tan \left( \frac{3.142}{4} - \frac{0.454}{2} \right) \right)^2 = 0.390$$

$$kp_1 = \left( \tan \left( \frac{\pi}{4} + \frac{\phi_{1_r}}{2} \right) \right)^2 = \left( \tan \left( \frac{3.142}{4} + \frac{0.454}{2} \right) \right)^2 = 2.561$$

$$z_2 = 15 \text{ (at the second layer boundary)}$$

$$\sigma_2 = \sigma_1 + h_2 \cdot \gamma_2 = 500.000 + 10 \cdot 110 = 1600.000$$

$$u_2 = 0.000$$

$$\sigma'_{v_2} = \sigma_2 - u_2 = 1600.000 - 0.000 = 1600.000$$

$$\phi_{2_r} = \text{radians}(\phi_2) = \text{radians}(30) = 0.524$$

$$ka_2 = \left( \tan \left( \frac{\pi}{4} - \frac{\phi_{2_r}}{2} \right) \right)^2 = \left( \tan \left( \frac{3.142}{4} - \frac{0.524}{2} \right) \right)^2 = 0.333$$

$$kp_2 = \left( \tan \left( \frac{\pi}{4} + \frac{\phi_{2_r}}{2} \right) \right)^2 = \left( \tan \left( \frac{3.142}{4} + \frac{0.524}{2} \right) \right)^2 = 3.000$$

$$z_3 = 22 \text{ (at the bottom of the soil profile)}$$

$$\sigma_3 = \sigma_2 + h_3 \cdot \gamma_3 = 1600.000 + 7 \cdot 120 = 2440.000$$

$$u_3 = 0.000$$

$$\sigma'_{v_3} = \sigma_3 - u_3 = 2440.000 - 0.000 = 2440.000$$

$$\phi_{3_r} = \text{radians}(\phi_3) = \text{radians}(34) = 0.593$$

$$ka_3 = \left( \tan \left( \frac{\pi}{4} - \frac{\phi_{3_r}}{2} \right) \right)^2 = \left( \tan \left( \frac{3.142}{4} - \frac{0.593}{2} \right) \right)^2 = 0.283$$

$$kp_3 = \left( \tan \left( \frac{\pi}{4} + \frac{\phi_{3_r}}{2} \right) \right)^2 = \left( \tan \left( \frac{3.142}{4} + \frac{0.593}{2} \right) \right)^2 = 3.537$$

$z_0 = 0$  (at the ground surface)

$$\sigma'_{ha_0} = ka_1 \cdot \sigma'_{v_0} - 2 \cdot c_1 \cdot \sqrt{ka_1} = 0.390 \cdot 0.000 - 2 \cdot 50 \cdot \sqrt{0.390} = -62.487$$

$$\sigma'_{hp_0} = kp_1 \cdot \sigma'_{v_0} + 2 \cdot c_1 \cdot \sqrt{kp_1} = 2.561 \cdot 0.000 + 2 \cdot 50 \cdot \sqrt{2.561} = 160.033$$

$z_1 = 5$  (at the first layer boundary)

$$\sigma'_{ha_{1t}} = ka_1 \cdot \sigma'_{v_1} - 2 \cdot c_1 \cdot \sqrt{ka_1} = 0.390 \cdot 500.000 - 2 \cdot 50 \cdot \sqrt{0.390} = 132.744$$

$$\sigma'_{hp_{1t}} = kp_1 \cdot \sigma'_{v_1} + 2 \cdot c_1 \cdot \sqrt{kp_1} = 2.561 \cdot 500.000 + 2 \cdot 50 \cdot \sqrt{2.561} = 1440.569$$

$$\sigma'_{ha_{1b}} = ka_2 \cdot \sigma'_{v_1} - 2 \cdot c_2 \cdot \sqrt{ka_2} = 0.333 \cdot 500.000 - 2 \cdot 0 \cdot \sqrt{0.333} = 166.667$$

$$\sigma'_{hp_{1b}} = kp_2 \cdot \sigma'_{v_1} + 2 \cdot c_2 \cdot \sqrt{kp_2} = 3.000 \cdot 500.000 + 2 \cdot 0 \cdot \sqrt{3.000} = 1500.000$$

$z_2 = 15$  (at the second layer boundary)

$$\sigma'_{ha_{2t}} = ka_2 \cdot \sigma'_{v_2} - 2 \cdot c_2 \cdot \sqrt{ka_2} = 0.333 \cdot 1600.000 - 2 \cdot 0 \cdot \sqrt{0.333} = 533.333$$

$$\sigma'_{hp_{2t}} = kp_2 \cdot \sigma'_{v_2} + 2 \cdot c_2 \cdot \sqrt{kp_2} = 3.000 \cdot 1600.000 + 2 \cdot 0 \cdot \sqrt{3.000} = 4800.000$$
