

# PDL Quick Reference

pip install prompt-declaration-language

pdl examples/hello/hello.pdl

LLM call with current context	Including a PDL file	Optional keywords for any block														
<pre>model: watsonx/ibm/granite-13b-chat-v2 parameters:   temperature: 0.1</pre>	<pre>include: ./helper_defs.pdl</pre>	<pre>description: documentation text</pre>														
LLM call with explicit input	Declaring and calling functions	<pre>def: x # define variable from block</pre>														
<pre>model: watsonx/ibm/granite-13b-chat-v2 parameters:   temperature: 0.1 input:   array:     - role: user       content: Hello,</pre>	<pre>def: add function:   x: int   y: int return: \${x + y}  call: add args:   x: 2   y: 2 pdl_context: [] # optional</pre>	<pre>defs: # define multiple variables   x: v1   y: v2  role: user # or system or assistant  contribute: [result, context] # or less  parser: json # or jsonl, yaml, regex  spec: type # type specification</pre>														
Reading from a file or stdin	Control constructs	spec Types (shorthand for JSON Schema)														
<pre>read: # optionally, add file name message: Please enter an input. multiline: true # omit to stop at \n</pre>	<pre>if: \${x &gt; 0} then: positive else: non-negative  for: # outputs 2_0_5   i: [1, 0, 1]   j: [2, 3, 5] repeat: \${i * j} join:   with: _ # optional  repeat: # outputs HiHiHi   text: Hi num_iterations: 3  repeat:   def: x   read: until: \${!(x   trim) == "stop"}</pre>	<table border="1"> <tr> <td>Basic types</td><td>str, int, float, bool, null</td></tr> <tr> <td>Arrays</td><td>[int]</td></tr> <tr> <td>Objects</td><td>{x: int, y: int}</td></tr> <tr> <td>Enums</td><td>{enum: [red, green, blue]}</td></tr> </table>	Basic types	str, int, float, bool, null	Arrays	[int]	Objects	{x: int, y: int}	Enums	{enum: [red, green, blue]}						
Basic types	str, int, float, bool, null															
Arrays	[int]															
Objects	{x: int, y: int}															
Enums	{enum: [red, green, blue]}															
Creating data (v1, v2 can be any block)	Executing code	`\${...}` Expressions (subset of Jinja2)														
<pre>text: # outputs "v1v2"   - v1   - v2  lastOf: # outputs v2   - v1   - v2  array: # outputs [v1, v2]   - v1   - v2  object: # outputs {k1: v1, k2: v2}   k1: v1   k2: v2  data: # outputs {k1: v1, model: v2}   k1: v1   model: v2 # no LLM call</pre>	<pre>lang: python code: result = "Hello, world!"</pre>	<table border="1"> <tr> <td>Basic values</td><td>"hi", 5, 3.1, true, none</td></tr> <tr> <td>Arrays</td><td>[1, 2, 3]</td></tr> <tr> <td>Objects</td><td>{"x": 4, "y": 5}</td></tr> <tr> <td>Variables</td><td>x, y[0], z.f</td></tr> <tr> <td>Operators</td><td>+, -, *, /, //, %, **, ~, and, or, not, ==, &lt;, &gt;, in</td></tr> <tr> <td>Tests</td><td>x if x is defined else 0</td></tr> <tr> <td>Filters</td><td>x   default(0)</td></tr> </table>	Basic values	"hi", 5, 3.1, true, none	Arrays	[1, 2, 3]	Objects	{"x": 4, "y": 5}	Variables	x, y[0], z.f	Operators	+, -, *, /, //, %, **, ~, and, or, not, ==, <, >, in	Tests	x if x is defined else 0	Filters	x   default(0)
Basic values	"hi", 5, 3.1, true, none															
Arrays	[1, 2, 3]															
Objects	{"x": 4, "y": 5}															
Variables	x, y[0], z.f															
Operators	+, -, *, /, //, %, **, ~, and, or, not, ==, <, >, in															
Tests	x if x is defined else 0															
Filters	x   default(0)
