Standard Location Example

This page uses conventional directory structure

This example demonstrates how pdfbaker organizes files with standard locations. Templates are in the standard templates/ directory, page configuration files are in the standard pages/ directory, and the document uses simple page references.

Custom Location Example

This page uses custom directory structure

This example demonstrates custom file locations in pdfbaker. The template file is in a custom directory (other_templates/), the page configuration file is in another custom directory (other_pages/), and the document configuration uses a path-based page reference with custom location.
