Competition Contribution

CPACHECKER is a modern and versatile framework for building software-verification analyses from well-known concepts that match the user's requirements.

- Support for all properties and categories of C programs
- Utilizes strategy selection to predict a sequential portfolio of analyses that is suitable for a given verification task
- New and improved analyses for:
 - Reachability
 - Memory safety
 - Termination
 - Overflows
 - Data races

Verification Strategy for SV-COMP 2024

Verification Strategy for SV-COMP 2024

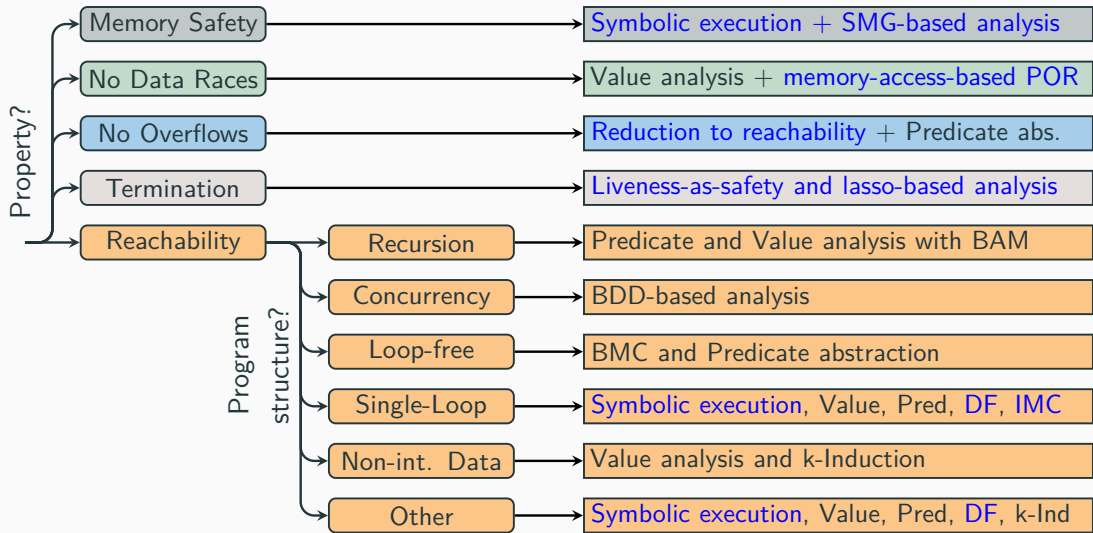

Verification Strategy for SV-COMP 2024

Competition Results

- 1st place in category *FalsificationOverall*
- 2nd place in category *Overall*
- 3rd place in category *ReachSafety*
- 17968 validated results in total (the most among all participants)
- Only 17 wrong results (0.06 % of all tasks)
